

Russia Calls on U.S. to Drop Missile Shield Plans

August 14, 2015

The  **Moscow Times**

The US Army Avenger Air Defense System (AN/TWQ-1) used to fire Stinger missiles is displayed with two test missiles during "Black Dart", a live-fly, live fire demonstration of 55 unmanned aerial vehicles, or drones, at Naval Base Ventura County Sea Range, Point Mugu, near Oxnard, California July 31, 2015.

Russia urged the United States on Friday to scrap plans to station parts of a missile shield system in Europe now that Iran has reached an agreement with world powers to limit its nuclear program.

Moscow has long opposed the plan, which it sees as a threat to its nuclear deterrence, and vowed to retaliate if it goes ahead. Washington has previously assured Moscow the shield was meant as protection from "rogue" states like Iran, and not directed against Russia.

Since the July agreement under which Tehran agreed to curb its nuclear program in exchange for an easing of UN, U.S. and European Union sanctions, Moscow has stepped up its rhetoric against the missile shield.

"We don't see any reason to continue with the program, let alone at such an accelerated pace and with a clear aim at the Russian nuclear potential," Deputy Foreign Minister Sergei Ryabkov told reporters.

The latest spat threatens to further worsen a deep chill in ties between Moscow and Washington, now at their lowest point since the Cold War because of the conflict in Ukraine.

Foreign Minister Sergei Lavrov said last week that U.S. President Barack Obama "was not telling the truth" in comments he made in 2009 linking the need for a missile shield to what the president called the "real threat" from Iranian nuclear and ballistic missile activity.

At the time, Obama said: "As long as the threat from Iran persists, we will go forward with a missile defense system that is cost-effective and proven. If the Iranian threat is eliminated, we will have a stronger basis for security, and the driving force for missile defense construction in Europe will be removed."

Moscow says those comments mean that with the resolution of the Iranian nuclear issue, Washington should now walk away from the missile shield plan.

But William Stevens, spokesman for the U.S. Embassy in Moscow, said even if the agreement was fully implemented, it did not annul the threat from Iran's ballistic missiles that Obama also mentioned back in 2009.

Under the July deal, UN sanctions on Iran's ballistic missiles program will stay in place for eight years.

"As long as Iran goes on developing and deploying ballistic missiles, the U.S. together with its allies and partners will be working to ensure protection from this threat, including through deploying the NATO missile shield system," Stevens said.

Ryabkov said Moscow ruled out the possibility of using mid-range ballistic missiles with non-nuclear warheads to target Europe.

"So I conclude that the U.S. administration is artificially stitching arguments together behind a decision to continue and increase the pace of creating the European missile shield that was in fact taken for different reasons," he said.

If the shield goes ahead, Russia has said it would retaliate, including by deploying short-range Iskander ballistic missiles in its exclave of Kaliningrad, on the border with NATO members Poland and Lithuania.

Ryabkov also said Russia and Iran had agreed on two bilateral deals as part of implementing the wider nuclear agreement, and were now discussing the details.

He said Russia would take in some 8 tons of low-enriched uranium from Iran in exchange for supplies of natural uranium. Moscow and Tehran would also produce medical isotopes at Iran's Fordow uranium enrichment facility.
