

2 Arrested in Scheme to Send Russia U.S. Military Tech

October 07, 2016

Eric Risberg / AP

Two Russian nationals have been arrested in the United States for an alleged scheme to illegally export cutting-edge U.S. electronics used in military hardware.

Dmitry Karpenko and Alexei Krutilin, were arrested in Denver, Colorado on Oct. 6, the U.S. Department of Justice [said in a statement](#). They were held with Alexei Barysheff, a New York resident and naturalized U.S. Citizen.

U.S. authorities allege that the men planned to obtain military-grade electronics from American manufacturers and bypass government export controls to send them to Russia.

The United States restricts the export of equipment which could have a “significant contribution to the military potential of other nations.”

The items targeted by the group, which included integrated circuits often used in surveillance and missile guidance systems, require a special license to be exported to Russia.

The group first planned to ship the electronics to Finland in a bid to conceal their true destination before sending them onto Russia, the Justice Department said.

If convicted, the men face up to 25 years in prison and a fine of up to \$1 million.
