The newly published decree [signed](#) by Putin on Tuesday charges the FSO with implementing “information warfare measures, detections, warnings and consequence management of computer attacks on Russian information resources.”

The decree, made public on the government's legal portal, also tasks the federal guards with

protecting the personal data of high-ranking officials and their family members.

The law's publication coincides with reports of a cryptocurrency mining virus that has infected the FSO's information security software. The contractor responsible for the agency's security has argued that the virus was placed on purpose to test its servers' defenses, RBC [reported](#) on Tuesday.

Putin's latest decree also grants the FSO powers to run emergency rescue and fire extinguishing operations.
