

4 Russian Nuclear Monitors 'Went Silent' Following Rocket Explosion – WSJ

August 20, 2019

rosatom.ru

Four of Russia's nuclear radiation monitoring stations went silent days after a mysterious explosion that led to a radiation spike in northern Russia earlier this month, The Wall Street Journal has reported.

Russian officials [say](#) at least five nuclear engineers were killed during a rocket test involving "isotope power sources" on a platform in the White Sea, leading to outside speculation that the accident involved a nuclear-powered cruise missile. Four international stations designed to monitor nuclear activity had detected "an event coinciding with the [Aug. 8] explosion in Nyonoksa, Russia," the world's main nuclear test-ban body [said](#) on Aug. 10.

The Dubna and Kirov stations told the Comprehensive Nuclear Test Ban Treaty Organization

(CTBTO) they were experiencing “communication and network issues” shortly after the explosion, its chief Lassina Zerbo [told](#) The Wall Street Journal.

The two stations are part of an international [network](#) of more than 300 stations set up to verify compliance with the Comprehensive Nuclear Test Ban Treaty (CTBT). They are the closest Russian stations to the Arkhangelsk region where the blast took place.

“We are pending further reports on when the stations or the communication system will be restored to full functionality,” Zerbo was quoted as saying Sunday.

Daryl Kimball, the head of the Arms Control Association NGO, called the data disruption “a very odd coincidence.”

To requests on [#IMS](#) detection beyond [#CTBT](#), data in, or near the path of potential plume from the explosion are being analyzed . We’re also addressing w/station operators technical problems experienced at two neighboring stations. All data are available to our Member States. <https://t.co/pHL4WrHU23pic.twitter.com/9aO5cQTlls>

— Lassina Zerbo (@SinaZerbo) [August 18, 2019](#)

“It is probably because they want to obscure the technical details of the missile-propulsion system they are trying and failing to develop,” The Wall Street Journal quoted Kimball as saying. “But this is not a legitimate reason to cut off test-ban monitoring data transmissions.”

The spokeswoman said later that two more stations, Bilibino and Zalesovo, stopped transmitting data on Aug. 13. Bilibino is in far eastern Siberia, outside the map of the simulated plume that Zerbo tweeted. But that simulation also showed the plume reaching Zalesovo on Aug. 13.

“Experts continue to reach out to our collaborators in Russia to resume operations as expediently as possible,” Zerbo was quoted as saying Monday.

Russia ratified the CTBT in 2000, but the treaty is yet to come into force because other nuclear technology states have not yet ratified it.

The U.S. accused Russia this year of violating the treaty by conducting low-level nuclear tests.

"Nuclear tests cannot be carried out secretly," senior Russian lawmaker Vladimir Shamanov had [said](#) in response to the allegations at the time.

Reuters contributed reporting to this article.
