

Russian Nuclear Sub Surfaces Off Alaska During War Games

August 28, 2020

Russia's nuclear-powered cruise missile submarine Omsk and missile cruiser Varyag fired at targets in the Bering Sea as part of the "Ocean Shield 2020" drills. **Dmitry Yefremov / TASS**

A Russian nuclear submarine has surfaced near Alaska during navy exercises, spooking American commercial fishing vessels in the area, the U.S. military [said](#) early Friday.

Russia's Defense Ministry [announced](#) Thursday that its nuclear-powered cruise missile submarine Omsk and missile cruiser Varyag fired at targets in the Bering Sea as part of its "Ocean Shield 2020" drills. Alaskan media reported that local pollock fishermen had a close encounter with the Russian vessels.

The U.S. Northern Command said that it and the North American Aerospace Defense Command were closely tracking the Russian submarine and other vessels in its area of responsibility.

“The current Russian maritime activity is taking place in international waters well outside the U.S. territorial sea,” the U.S. Northern Command said in a [tweet](#).

“We have not received any requests for assistance from the Russian Navy or other mariners in the area. We always stand ready to assist those in distress,” it added.

Alaskan fishermen apparently [learned](#) of the Russian Pacific Fleet war games from the Coast Guard on Wednesday, which itself learned about the drills from the Northern Command’s Alaska Command, according to Alaska Public Media.

Photos of the fishermen’s encounters with the Russian vessels reportedly spread on social media.

“They are telling American fishing vessels to move out of the way,” Brent Paine, executive director at the industry trade group United Catcher Boats, told Alaska Public Media.

“If you’ve got a net in the water and a submarine’s coming through, you’re going to lose the battle,” Paine said.
